MSc Mathematical Finance | Data Analytics & Machine Learning |
Python & Power BI | Finance & Risk
London Area, United Kingdom

Summary

I am an early-career professional working at the intersection of data, finance and business decision-making, with an MSc in Mathematical Finance from the University of York and an engineering background from the Chinese University of Hong Kong. My experience spans data analytics, M&A, asset management and energy finance. In my current analytics internship, I work with ERP data and Power BI to translate stakeholder needs into KPIs and dashboards, while identifying data-quality and process issues that affect decision-making. Alongside this, I have developed hands-on experience in Python, SQL and machine learning, including predictive modelling projects using Random Forest and XGBoost. What interests me most is using data to solve real business problems — combining quantitative analysis with commercial understanding, and communicating technical findings in a way that helps stakeholders make better decisions. I am currently exploring graduate and early-career opportunities in data analytics, risk, financial analytics and related quantitative roles in the UK and Hong Kong. Feel free to connect with me.

Experience

@Cloud Marketplace Ministry 雲端職場事工

NextGen Data Science & Analytics Intern

May 2026 - Present (5 months)

San Jose, CA

- Develop Power BI dashboards from ERP data for leadership, translating stakeholder requirements into KPIs covering organisational engagement, events and internal performance.
- Conducted data quality and workflow analysis, identifying missing identifiers, duplicate records and registration-linkage issues; translated findings into recommendations for improved upstream data capture and reporting.

- Collaborate with leadership and cross-functional stakeholders to define analytics priorities and communicate insights; invited to continue supporting the organisation's ERP priorities following the initial BI project.

HSA Advisory

M&A Advisory Summer Analyst

June 2025 - July 2025 (2 months)

London Area, United Kingdom

- Built DCF, sensitivity and comparable-company models (EV/Revenue, EV/EBITDA) for client pitch decks, including analysis of a £9bn AUM wealth-management target.
- Analysed UK mid-market FIG and wealth-management trends across 10+ companies, identifying consolidation opportunities and supporting M&A deal origination.
- Synthesised valuation, market and company analysis into client-ready recommendations and pitch materials supporting business development.

Axtrade LTD

Asset Management Intern

January 2025 - February 2025 (2 months)

London Area, United Kingdom

- Researched structured products and developed tailored investment materials for 3+ high-net-worth investors, covering strategy, risk-return profiles and macroeconomic scenarios.
- Analysed Actively Managed Certificates (AMCs) and their investment structures to support a business plan targeting \$5m in AUM.
- Conducted private-debt and cash-flow analysis for a mock £300m hotel-refinancing proposal, assessing financing structure and cash-flow optimisation.

AllGreen Energy

Financial & Data Analytics Intern

April 2024 - August 2024 (5 months)

England, United Kingdom

- Refined a 25-year DCF and scenario-analysis model using NPV, IRR and payback-period analysis for a £320k solar project, supporting projections of ~16% higher net profit and 20% higher revenue.

- Built regression models in Python and R to forecast electricity prices, improving revenue-forecast accuracy by approximately 10%.
- Conducted sensitivity and scenario analysis on energy-price volatility and macroeconomic drivers to support long-term capital-allocation decisions.

CUHK Faculty of Engineering
Undergraduate STEM Ambassador Program
June 2021 - June 2021 (1 month)
Hong Kong SAR

Projects: Smart Home Systems, Programmable Robots & Vehicle-Sensor Applications

- Co-led a team of four engineering students delivering hands-on workshops for secondary-school students, including a Smart Home Systems project that improved household energy efficiency by ~20%.
- Collaborated on Python-based vehicle-sensor applications, contributing to prototype development and user-experience improvements.

A.S. Watson Group
Summer Student Trainee
July 2018 - August 2018 (2 months)
Hong Kong SAR

Education

University of York
Master of Science - MS, Mathematical Finance

The Chinese University of Hong Kong
Bachelor of Engineering - BE, Electronics Engineering

National Taiwan University
Special Visiting Student · (December 2019 - January 2020)
