Data Analytics & AI | Financial & Risk Analytics | Mathematical
Finance | AWS Certified AI Practitioner

London Area, United Kingdom

Summary

I enjoy turning complex data into meaningful insights that help people make better decisions. My journey began in engineering at the Chinese University of Hong Kong, where I developed a strong foundation in analytical thinking and problem-solving. Curious about how these skills could create business value, I pursued an MSc in Mathematical Finance at the University of York, deepening my understanding of quantitative modelling, financial markets, and risk. Through internships in M&A advisory, asset management, and energy finance, I discovered that what excites me most is not just analysing numbers, but uncovering the story behind them and turning insights into practical recommendations. This curiosity led me towards data analytics and AI. In my current internship, I collaborate with US-based stakeholders to develop Power BI dashboards, define KPIs, and improve data quality. I've also built hands-on projects in Python, machine learning, and generative AI, from predicting employee turnover to developing my own AI-powered Career Twin chatbot. I'm passionate about bridging data, technology, and business, combining quantitative skills with commercial understanding to solve real-world challenges. I'm currently exploring graduate and early-career opportunities in Data Analytics, AI, Financial Analytics, and Risk, including UK-based and remote roles. Always happy to connect and learn from others!

Experience

@Cloud Marketplace Ministry 雲端職場事工

Data Science & Analytics Intern

June 2026 - Present (5 months)

San Jose, California, United States

- Develop interactive Power BI dashboards using ERP data, translating stakeholder requirements into actionable KPIs to monitor organisational engagement, event participation, and operational performance.

- Analyse data quality and reporting workflows, identifying missing identifiers, duplicate records, and registration-linkage issues; recommend improvements to data capture, consistency, and reporting reliability.
- Collaborate remotely with US-based leadership and cross-functional stakeholders to define reporting priorities, communicate analytical findings, and support data-driven decision-making. Invited to continue contributing to ERP improvement initiatives following the initial BI project.

HSA Advisory

Mergers & Acquisitions Summer Analyst

June 2025 - July 2025 (2 months)

London Area, United Kingdom

- Built discounted cash flow (DCF), sensitivity analysis, and comparable-company valuation models using EV/Revenue and EV/EBITDA multiples, including analysis of a wealth management target with approximately £9bn in assets under management (AUM).
- Researched UK mid-market financial institutions and wealth management trends, analysing 10+ companies to identify potential acquisition targets, market consolidation opportunities, and strategic considerations for M&A deal origination.
- Translated financial modelling, company research, and market analysis into client-ready pitch materials, communicating valuation insights and commercial opportunities to support advisory recommendations and business development.

Axtrade LTD

Asset Management Intern

January 2025 - February 2025 (2 months)

London Area, United Kingdom

- Conducted investment research on structured products and developed tailored investment materials for 3+ high-net-worth investors, evaluating investment strategies, risk-return profiles, and macroeconomic scenarios.
- Analysed Actively Managed Certificates (AMCs), including their investment structures and portfolio strategies, to support business planning for a proposed investment offering targeting \$5m in assets under management (AUM).

- Performed private debt and cash flow analysis for a simulated £300m hotel refinancing transaction, evaluating financing structures, debt servicing considerations, and opportunities for cash flow optimisation.

AllGreen Energy

Financial & Data Analytics Intern

April 2024 - August 2024 (5 months)

England, United Kingdom

- Refined a 25-year discounted cash flow (DCF) model for a £320k solar energy project, applying NPV, IRR, payback period, and scenario analysis to evaluate investment viability and support financial projections of approximately 16% higher net profit and 20% revenue growth.
- Developed regression-based electricity price forecasting models using Python and R, improving forecast accuracy by approximately 10% to support more reliable revenue projections.
- Conducted sensitivity and scenario analysis to assess the impact of electricity price volatility and macroeconomic factors on project returns, providing financial insights to inform long-term investment and capital allocation decisions.

CUHK Faculty of Engineering

Undergraduate STEM Ambassador Program

June 2021 - June 2021 (1 month)

Hong Kong SAR

- Co-led a team of four engineering students to design and deliver interactive STEM workshops for secondary school students, demonstrating practical applications of engineering and technology.
- Developed a Smart Home Systems prototype incorporating energy-saving solutions, achieving approximately 20% improvement in energy efficiency during project testing.
- Collaborated on Python-based vehicle sensor applications and programmable robotics projects, contributing to prototype development, technical problem-solving, and user experience improvements.

A.S. Watson Group

Summer Student Trainee

July 2018 - August 2018 (2 months)

Hong Kong SAR

Education

University of York

Master of Science - MS, Mathematical Finance

The Chinese University of Hong Kong

Bachelor of Engineering - BE, Electronics Engineering

National Taiwan University

Special Visiting Student · (December 2019 - January 2020)
